1. webpack介绍

- Webpack是一个前端资源加载/打包工具。它将根据模块的依赖关系进行静态分析，然后将这些模块按照指定的规则生成对应的静态资源。

2. 预备知识

2.1 toStringTag

- Symbol.toStringTag 是一个内置 symbol，它通常作为对象的属性键使用，对应的属性值应该为字符串类型，这个字符串用来表示该对象的自定义类型标签，通常只有内置的 Object.prototype.toString() 方法会去读取这个标签并把它包含在自己的返回值里。

```
console.log(Object.prototype.toString.call('foo'));  
console.log(Object.prototype.toString.call([1, 2]));  
console.log(Object.prototype.toString.call(3));  
console.log(Object.prototype.toString.call(true));  
console.log(Object.prototype.toString.call(undefined));  
console.log(Object.prototype.toString.call(null));  
let myExports={};  
Object.defineProperty(myExports, Symbol.toStringTag, { value: 'Module' });  
console.log(Object.prototype.toString.call(myExports));
```

2.2 Object.create(null)

- 使用 create 创建的对象，没有任何属性,把它当作一个非常纯净的map来使用，我们可以自己定义 hasOwnProperty、toString方法,完全不必担心会将原型链上的同名方法覆盖掉
- 在我们使用 for...in 循环的时候会遍历对象原型链上的属性，使用 create(null) 就不必再对属性进行检查了

```
var ns = Object.create(null);  
if (typeof Object.create !== "function") {  
  Object.create = function (proto) {  
    function F() {}  
    F.prototype = proto;  
    return new F();  
  };  
}  
console.log(ns)  
console.log(Object.getPrototypeOf(ns));
```

2.3 getter

- defineProperty (https://developer.mozilla.org/zh-CN/docs/Web/JavaScript/Reference/Global_Objects/Object/defineProperty) 方法会直接在一个对象上定义一个新属性，或者修改一个对象的现有属性，并返回这个对象。
 - obj 要在其上定义属性的对象。
 - prop 要定义或修改的属性的名称。
 - descriptor 将被定义或修改的属性描述符。

2.3.1 描述符可同时具有的键值

configurable enumerable value writable get set 数据描述符 Yes Yes Yes Yes No No 存取描述符 Yes Yes No No Yes Yes

2.3.2 示例

```
var ageValue = 10;  
let obj = {};  
Object.defineProperty(obj, "age", {  
  
  get() {  
    return ageValue;  
  },  
  set(newValue) {  
    ageValue = newValue;  
  },  
  
  enumerable: true,  
  configurable: true  
});  
Object.defineProperty(obj, "name", {  
  value: 'zhufeng',  
  writable: true,  
  enumerable: true,  
  configurable: true  
});  
console.log(obj.age, obj.name);  
obj.age = 100;  
obj.name = 'jiagou';  
console.log(obj.age, obj.name);
```

2. 同步加载 <#>

2.1 webpack.config.js <#>

```
const path = require('path');
const HtmlWebpackPlugin=require('html-webpack-plugin');
module.exports = {
  mode:'development',
  devtool:"none",
  context: process.cwd(),
  entry: './src/index.js',
  output: {
    filename: 'bundle.js'
  },
  devServer:{
    contentBase:path.resolve(__dirname, './dist')
  },
  module: {
    rules: [
      {
        test: /\.js$/,
        use: {
          loader: "babel-loader",
          options: {
            presets:["@babel/preset-env"]
          }
        },
        include: path.join(__dirname, "src"),
        exclude: /node_modules/
      }
    ]
  },
  plugins: []
};
```

2.2 index.js <#>

src\index.js

```
let title = require('./title.js');
console.log(title);
```

2.3 title.js <#>

src\title.js

```
module.exports = "title";
```

2.4 打包文件分析 <#>

```

(function(modules) {

var installedModules = {};

function __webpack_require__(moduleId) {

  if (installedModules[moduleId]) {
    return installedModules[moduleId].exports;
  }

  var module = (installedModules[moduleId] = {
    i: moduleId,
    l: false,
    exports: {}
  });

  modules[moduleId].call(
    module.exports,
    module,
    module.exports,
    __webpack_require__
  );

  module.l = true;

  return module.exports;
}

__webpack_require__.m = modules;

__webpack_require__.c = installedModules;

__webpack_require__.d = function(exports, name, getter) {
  if (!__webpack_require__.o(exports, name)) {
    Object.defineProperty(exports, name, { enumerable: true, get: getter });
  }
};

__webpack_require__.r = function(exports) {
  if (typeof Symbol !== "undefined" && Symbol.toStringTag) {
    Object.defineProperty(exports, Symbol.toStringTag, { value: "Module" });
  }
  Object.defineProperty(exports, "__esModule", { value: true });
};

__webpack_require__.t = function(value, mode) {
  if (mode & 1) value = __webpack_require__(value);
  if (mode & 8) return value;
  if (mode & 4 && typeof value === "object" && value && value.__esModule)
    return value;
  var ns = Object.create(null);
  __webpack_require__.r(ns);
  Object.defineProperty(ns, "default", { enumerable: true, value: value });
  if (mode & 2 && typeof value !== "string")
    for (var key in value)
      __webpack_require__.d(
        ns,
        key,
        function(key) {
          return value[key];
        }.bind(null, key)
      );
  return ns;
};

__webpack_require__.n = function(module) {
  var getter =
    module && module.__esModule
      ? function getDefault() {
          return module["default"];
        }
      : function getModuleExports() {
          return module;
        };
  __webpack_require__.d(getter, "a", getter);
  return getter;
};

__webpack_require__.o = function(object, property) {
  return Object.prototype.hasOwnProperty.call(object, property);
};

__webpack_require__.p = "";

return __webpack_require__((__webpack_require__.s = "./src/index.js"));
})({
  "./src/index.js": function(module, exports, __webpack_require__) {
    var title = __webpack_require__("./src/title.js");
    console.log(title);
  },
  "./src/title.js": function(module, exports) {
    module.exports = "title";
  }
});

```

2.5 实现 <#>

2.5.1 webpack_require <#>

- 实现require方法

```

(function(modules){
  var installedModules = {};
  function __webpack_require__(moduleId) {
    if(installedModules[moduleId]) {
      return installedModules[moduleId];
    }
    var module = installedModules[moduleId] = {
      i:moduleId,
      l:false,
      exports:{}
    }
    modules[moduleId].call(module.exports,module,module.exports,__webpack_require__);
    module.l = true;
    return module.exports;
  }
  return __webpack_require__((__webpack_require__.s = "./src/index.js"));
})({
  "./src/index.js":function(module,exports,__webpack_require__){
    var title = __webpack_require__('./src/title.js');
    console.log(title);
  },
  "./src/title.js":function(module,exports){
    module.exports = "title";
  }
})

```

2.5.2 d(defineProperty)

- 通过 getter 的方式增加属性

```

function d(exports, name, getter) {
  if (!exports.hasOwnProperty(name)) {
    Object.defineProperty(exports, name, { get: getter });
  }
}

let obj = {};
function ageGetter() {
  return 10;
}
d(obj, 'age', ageGetter);
console.log(obj.age);

```

2.5.3 r

- 表示此对象是一个ES6模块对象

```

function r(exports) {
  Object.defineProperty(exports, Symbol.toStringTag, { value: 'Module' });
  Object.defineProperty(exports, '__esModule', { enumerable: true, value: true });
};

let obj2 = {};
r(obj2);
console.log(obj2);

```

2.5.4 n

- 获取此对象的默认导出

```

function n(module) {
  var getter = module.__esModule ?
    function () { return module['default']; } :
    function () { return module; };
  d(getter, 'a', getter);
  return getter;
};

let m = { age: 10 };
let getter = n(m);
console.log(getter.a);
let m2 = { default: { age: 20 }, __esModule: true };
let getter2 = n(m2);
console.log(getter2.a);

```

2.5.5 t

- 把任意模块包装成ES6模块
- mode & 1: value is a module id, require it 表示传的是模块ID
- mode & 2: merge all properties of value into the ns 需要合并属性
- mode & 4: return value when already ns object 如果是ES6模块直接返回
- mode & 8|1: behave like require 等同于require方法

```

let modules = {

  'moduleA': function (module, exports) {
    module.exports = 'moduleA导出内容';
  },

  'moduleB': function (module, exports) {
    module.exports = { __esModule: true, default: 'moduleB导出内容' };
  },

  'moduleC': function (module, exports) {
    module.exports = { name: 'moduleC导出内容' };
  }
}

function __webpack_require__(moduleId) {
  var module = {
    i: moduleId,
    l: false,
    exports: {}
  }
  modules[moduleId].call(modules.exports, module, module.exports, __webpack_require__);
  module.l = true;
  return module.exports;
}

function t(value, mode) {
  if (mode & 1) value = __webpack_require__(value);
  if (mode & 8) return value;
  if ((mode & 4) && typeof value === 'object' && value && value.__esModule) return value;
  var ns = Object.create(null);
  Object.defineProperty(ns, Symbol.toStringTag, { value: 'Module' });
  Object.defineProperty(ns, '__esModule', { enumerable: true, value: true });
  Object.defineProperty(ns, 'default', { enumerable: true, value: value });
  if (mode & 2 && typeof value !== 'string')
    for (var key in value)
      Object.defineProperty(ns, key, { enumerable: true, get: () => value[key] });
  return ns;
};

let result1 = t('moduleA', 0b1001);
console.log(result1);
let result2 = t('moduleB', 0b0101);
console.log(result2);
let result3 = t('moduleC', 0b0011);
console.log(result3, result3.name);

```

3. harmony

3.1 common.js加载 common.js

3.1.1 index.js

```

let title = require('./title');
console.log(title.name);
console.log(title.age);

```

3.1.2 title.js

```

exports.name = 'title_name';
exports.age = 'title_age';

```

3.1.3 bundle.js

```

{
  "./src/index.js":
    (function(module, exports, __webpack_require__) {
      var title = __webpack_require__("./src/title.js");
      console.log(title.name);
      console.log(title.age);
    }),
  "./src/title.js":
    (function(module, exports) {
      exports.name = 'title_name';
      exports.age = 'title_age';
    })
}

```

3.2 common.js加载 ES6 modules

```

▼ Module {default: "title_name", __esModule: true, Symbol(Symbol.toStringTag): "Module"} ⓘ
  age: (...)
  default: "title_name"
  Symbol(Symbol.toStringTag): "Module"
  __esModule: true
  ► get age: f ()
  ► __proto__: Object

```

title_name

title_age

3.2.1 index.js

```

let title = require('./title');
console.log(title);
console.log(title.default);
console.log(title.age);

```

3.2.2 title.js

```
export default name = 'title_name';
export const age = 'title_age';
```

3.2.3 bundle.js

```
{
  "./src/index.js":
    (function (module, exports, __webpack_require__) {
      var title = __webpack_require__( "./src/title.js");
      console.log(title.name);
      console.log(title.age);
    }),
  "./src/title.js":
    (function (module, __webpack_exports__, __webpack_require__) {
      __webpack_require__.r(__webpack_exports__);

      __webpack_require__.d(__webpack_exports__, "age", function () { return age; });

      __webpack_exports__["default"] = (name = 'title_name');
      var age = 'title_age';
    })
}
```

3.3 ES6 modules 加载 ES6 modules

3.3.1 index.js

```
import name,{age} from './title';
console.log(name);
console.log(age);
```

3.3.2 title.js

```
export default name = 'title_name';
export const age = 'title_age';
```

3.3.3 bundle.js

```
{
  "./src/index.js":
    (function (module, __webpack_exports__, __webpack_require__) {
      "use strict";
      __webpack_require__.r(__webpack_exports__);
      var title__WEBPACK_IMPORTED_MODULE_0__ = __webpack_require__( "./src/title.js");
      console.log(title__WEBPACK_IMPORTED_MODULE_0__["default"]);
      console.log(title__WEBPACK_IMPORTED_MODULE_0__["age"]);
    }),
  "./src/title.js":
    (function (module, __webpack_exports__, __webpack_require__) {
      __webpack_require__.r(__webpack_exports__);
      __webpack_require__.d(__webpack_exports__, "age", function () { return age; });
      __webpack_exports__["default"] = (name = 'title_name');
      var age = 'title_age';
    })
}
```

3.4 ES6 modules 加载 common.js

3.4.1 index.js

```
import home, { name, age } from './title';
console.log(name);
console.log(age);
console.log(home);
```

3.4.2 title.js

```
module.exports = { home: 'beijing' };
module.exports.name = 'title_name';
module.exports.age = 'title_age';
```

3.4.3 bundle.js

```
{
  "./src/index.js":
    (function (module, __webpack_exports__, __webpack_require__) {
      __webpack_require__.r(__webpack_exports__);
      var title__WEBPACK_IMPORTED_MODULE_0__ = __webpack_require__( "./src/title.js");
      var title__WEBPACK_IMPORTED_MODULE_0__default = __webpack_require__.n(title__WEBPACK_IMPORTED_MODULE_0__);
      console.log(title__WEBPACK_IMPORTED_MODULE_0__["name"]);
      console.log(title__WEBPACK_IMPORTED_MODULE_0__["age"]);
      console.log(title__WEBPACK_IMPORTED_MODULE_0__default.a);
    }),
  "./src/title.js":
    (function (module, exports) {
      module.exports = {
        home: 'beijing'
      };
      module.exports.name = 'title_name';
      module.exports.age = 'title_age';
    })
}
```

4. 异步加载

4.1 源文件

4.1.1 index.html

```
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <meta http-equiv="X-UA-Compatible" content="ie=edge">
  <title>Documenttitle</title>
</head>
<body>
  body
</body>
</html>
```

4.1.2 src\index.js <#>

src\index.js

```
let button = document.createElement("button");
button.innerHTML = "点我";
button.onclick = function () {
  import('./title.js').then(function (result) {
    console.log(result, result.default);
  });
};
document.body.appendChild(button);
```

4.1.3 src\title.js <#>

src\title.js

```
module.exports = {
  name: 'title'
}
module.exports.age = 10;
```

4.2 打包后的文件 <#>

4.2.1 <#>

```
(function (modules) {

  function webpackJsonpCallback(data) {
    var chunkIds = data[0];
    var moreModules = data[1];

    var moduleId, chunkId, i = 0, resolves = [];
    for (; i < chunkIds.length; i++) {
      chunkId = chunkIds[i];
      if (installedChunks[chunkId]) {
        resolves.push(installedChunks[chunkId][0]);
      }
      installedChunks[chunkId] = 0;
    }
    for (moduleId in moreModules) {
      if (Object.prototype.hasOwnProperty.call(moreModules, moduleId)) {
