1. webpack 介绍

- Webpack是一个前端资源加载/打包工具。它将根据模块的依赖关系进行静态分析，然后将这些模块按照指定的规则生成对应的静态资源。

2. 预备知识

2.1 toStringTag

- Symbol.toStringTag 是一个内置 symbol，它通常作为对象的属性键使用，对应的属性值应该为字符串类型，这个字符串用来表示该对象的自定义类型标签
- 通常只有内置的 Object.prototype.toString() 方法会去读取这个标签并把它包含在自己的返回值里。

```
console.log(Object.prototype.toString.call("foo"));  
console.log(Object.prototype.toString.call([1, 2]));  
console.log(Object.prototype.toString.call(3));  
console.log(Object.prototype.toString.call(true));  
console.log(Object.prototype.toString.call(undefined));  
console.log(Object.prototype.toString.call(null));  
let myExports = {};  
Object.defineProperty(myExports, Symbol.toStringTag, { value: "Module" });  
console.log(Object.prototype.toString.call(myExports));
```

```
[object String]  
[object Array]  
[object Number]  
[object Boolean]  
[object Undefined]  
[object Null]  
[object Module]
```

2.2 defineProperty

- [defineProperty \(https://developer.mozilla.org/zh-CN/docs/Web/JavaScript/Reference/Global_Objects/Object/defineProperty\)](https://developer.mozilla.org/zh-CN/docs/Web/JavaScript/Reference/Global_Objects/Object/defineProperty) 方法会直接在一个对象上定义一个新属性，或者修改一个对象的现有属性，并返回这个对象。
 - obj 要在其上定义属性的对象。
 - prop 要定义或修改的属性的名称。
 - descriptor 将被定义或修改的属性描述符。

```
let obj = {};  
var ageValue = 10;  
  
Object.defineProperty(obj, "age", {  
  
  get() {  
    return ageValue;  
  },  
  set(newValue) {  
    ageValue = newValue;  
  },  
  
  enumerable: true,  
  configurable: true,  
});  
  
console.log(obj.age);  
obj.age = 20;  
console.log(obj.age);
```

3. 同步加载

3.1 安装模块

```
cnpm i webpack webpack-cli html-webpack-plugin clean-webpack-plugin -D
```

3.2 webpack.config.js

```
const path = require("path");
const HtmlWebpackPlugin = require("html-webpack-plugin");
const { CleanWebpackPlugin } = require("clean-webpack-plugin");
module.exports = {
  mode: "development",
  devtool: "source-map",
  entry: "./src/index.js",
  output: {
    path: path.resolve(__dirname, "dist"),
    filename: "main.js",
  },
  module: {},
  plugins: [
    new CleanWebpackPlugin({ cleanOnceBeforeBuildPatterns: ["**/*"] }),
    new HtmlWebpackPlugin({
      template: "./src/index.html",
      filename: "index.html",
    }),
  ],
  devServer: {},
};
```

3.2 index.js

src\index.js

```
let title = require("../title.js");
console.log(title);
```

3.3 title.js

src\title.js

```
module.exports = "title";
```

3.4 index.html

src\index.html

```
<html lang="en">
  <head>
    <meta charset="UTF-8" />
    <meta name="viewport" content="width=device-width, initial-scale=1.0" />
    <title>webpacktitle</title>
  <head>
  <body>body</body>
</html>
```

3.5 package.json

package.json

```
{
  "scripts": {
    "build": "webpack"
  }
}
```

3.6 打包文件

```
() => {
  var modules = ({
    "../src/title.js":
      (module) => {
        module.exports = "title";
      })
  });
  var cache = {};
  function require(moduleId) {
    if (cache[moduleId]) {
      return cache[moduleId].exports;
    }
    var module = cache[moduleId] = {
      exports: {}
    };
    modules[moduleId](module, module.exports, require);
    return module.exports;
  }
  () => {
    let title = require("../src/title.js");
    console.log(title);
  }();
}();
```

4. 兼容性实现

4.1 common.js 加载 common.js

4.1.1 index.js

```
let title = require("../title");
console.log(title.name);
console.log(title.age);
```

4.1.2 title.js

```
exports.name = "title_name";
exports.age = "title_age";
```

4.1.3 main.js

```

(() => {
  var modules = ({
    './src/title.js':
      (module, exports) => {
        exports.name = 'title_name';
        exports.age = 'title_age';
      }
  });
  var cache = {};
  function require(moduleId) {
    var cachedModule = cache[moduleId];
    if (cachedModule !== undefined) {
      return cachedModule.exports;
    }
    var module = cache[moduleId] = {
      exports: {}
    };
    modules[moduleId](module, module.exports, require);
    return module.exports;
  }
  var exports = {};
  (() => {
    let title = require('./src/title.js');
    console.log(title.name);
    console.log(title.age);
  })();
})();
;

```

4.2 common.js 加载 ES6 modules <#>

4.2.1 index.js <#>

```

let title = require('./title');
console.log(title);
console.log(title.age);

```

4.2.2 title.js <#>

```

export default "title_name";
export const age = "title_age";

```

4.2.3 main.js <#>

```

(() => {
  var modules = ({
    './src/title.js':
      (module, exports, require) => {
        require.r(exports);
        require.d(exports, {
          'default': () => (_DEFAULT_EXPORT__),
          'age': () => (age)
        });
        const _DEFAULT_EXPORT__ = ('title_name');
        const age = 'title_age';
      }
  });
  var cache = {};
  function require(moduleId) {
    var cachedModule = cache[moduleId];
    if (cachedModule !== undefined) {
      return cachedModule.exports;
    }
    var module = cache[moduleId] = {
      exports: {}
    };
    modules[moduleId](module, module.exports, require);
    return module.exports;
  }
  require.d = (exports, definition) => {
    for (var key in definition) {
      if (require.o(definition, key) && !require.o(exports, key)) {
        Object.defineProperty(exports, key, { enumerable: true, get: definition[key] });
      }
    }
  };
  require.o = (obj, prop) => (Object.prototype.hasOwnProperty.call(obj, prop));
  require.r = (exports) => {
    if (typeof Symbol !== 'undefined' && Symbol.toStringTag) {
      Object.defineProperty(exports, Symbol.toStringTag, { value: 'Module' });
    }
    Object.defineProperty(exports, '__esModule', { value: true });
  };
  let title = require('./src/title.js');
  console.log(title);
  console.log(title.age);
})();
;

```

4.3 ES6 modules 加载 ES6 modules <#>

4.3.1 index.js <#>

```

import name, { age } from './title';
console.log(name);
console.log(age);

```

4.3.2 title.js <#>

```

export default name = "title_name";
export const age = "title_age";

```

4.3.3 main.js <#>

```

() => {
  "use strict";
  var modules = ({
    "./src/title.js":
      (module, exports, require) => {
        require.r(exports);
        let _DEFAULT_EXPORT__ = ('title_name');
        let age = 'title_age';
        setTimeout(() => {
          age = 'new';
        }, 1000);

        exports.age = age;
      })
  });
  var cache = {};
  function require(moduleId) {
    var cachedModule = cache[moduleId];

;

```

5.异步加载

5.1 webpack.config.js

```

const path = require("path");
const HtmlWebpackPlugin = require("html-webpack-plugin");
const { CleanWebpackPlugin } = require("clean-webpack-plugin");
module.exports = {
  mode: "development",
  devtool: "source-map",
  entry: "./src/index.js",
  output: {
    path: path.resolve(__dirname, "dist"),
    filename: "main.js",
  },
  module: {},
  plugins: [
    new CleanWebpackPlugin({ cleanOnceBeforeBuildPatterns: ["**/*"] }),
    new HtmlWebpackPlugin({
      template: "./src/index.html",
      filename: "index.html",
    }),
  ],
  devServer: {},
};

```

5.2 src/index.js

src/index.js

```

import( "./hello" ).then((result) => {
  console.log(result.default);
});

```

5.3 hello.js

src/hello.js

```

export default 'hello';

```

5.4 dist/main.js

```
