# 1. roadhog #

- · 还提供了 JSON 格式的配置方式。
- roadhog (https://www.npmjs.com/package/roadhog)

#### 1.1 安装 <u>#</u>

#### 1.1.1 全局安装roadhog #

\$ npm i roadhog -g

## 1.1.2 创建项目 #

```
mkdir zhufeng_roadhog
cd zhufeng_roadhog
cnpm init -y
```

#### 1.2 编码 #

• 默认入口文件为 src/index.js, 编译后会放置到 dist\index.js1.2.1 index.js #src\index.js

```
import React from 'react';
import ReactDOM from 'react-dom';
ReactDOM.render(<h1>helloh1>, document.getElementById('root'));
```

## \*\* 1.2.2 index.html #\*\*

• public目录也是静态文件根目录

#### public\index.html

```
<html lang="en">
<body>
    <div id="root">div>
<script src="index.js">script>
html>
```

# \*\* 1.2.3 sum.js <u>#</u>\*\*

```
module.exports = function (a, b) {
   return a + b;
```

\*\* 1.2.4 sum.test.js #\*\*

# test\sum.test.js

```
let sum = require('../src/sum');
describe('sum', function () {
    it('1+2=3', function () {
        expect(sum(1, 2)).toBe(3);
}
              });
```

# 1.3 启动 <u>#</u>

\*\* 1.3.1 本地开发 #\*\*

\$ roadhog server

\*\* 1.3.2 打包发布 #\*\*

\$ roadhog build

\*\* 1.3.2 测试 <u>#</u>\*\*

# 1.3.2.1生成配置文件 #

npx jest --init

## jest.config.js

```
module.exports = {
  testEnvironment: "jsdom",
  testURL: "http://localhost"
```

#### 1.3.2.2 执行测试命令#

\$ roadhog test

# 2. package.json #

```
"scripts": {
    "dev": "roadhog server",
    "build": "roadhog build",
    "test": "roadhog test"
```

## 3. .roadhogrc #

- 配置文件修改的修改会触发 roadhog server 的自动重启
   配置存于 . roadhogrc 文件中(如果你不喜欢 JSON 配置,可以用 .roadhogrc.js 以 JS 的方式编写,支持 ES6)
   格式为 JSON,允许注释

#### 3.1 默认配置 #

```
"entry": "src/index.js",
"disableCSSModules": false,
"publicPath": "/",
"outputPath": "./dist"
"extraBabelPlugins": [],
"extraPostCSSPlugins": [],
"autoprefixer": null,
"proxy": null,
"externals": null.
"library": null,
"libraryTarget": "var",
"multipage": false,
"define": null,
"env": null,
"theme": null,
```

参数 含义 entry 指定 webpack 入口文件,支持 glob 格式 outputPath 配置输出路径,默认是 ./dist disableCSSModules 禁用 CSS Modules publicPath 配置生产环境的 publicPath,开发环境下永远为 / 多数 A Centry The webpeac (A Centry The Webpeac (A Centry The Centry The Webpeac (A Centr less 的 modifyVars

#### 4. .roadhogrc.mock.js #

```
export default {
   'GET /api/users': { users: [1,2] },
   'GET /api/users/1': { id: 1 },
   'POST /api/users/create': (req, res) => { res.end('OK'); },
```

## 5. 实现 #

# 5.1 初始化项目 **#**

```
mkdir zfroadhog
cd zfroadhog
cnpm i chalk cross-spawn webpack -S
```

## 5.2 package.json #

```
"bin": {
  "zfroadhog": "./bin/zfroadhog.js"
},
```

# 5.3 roadhog.js #

bin\roadhog.js

```
const spawn = require('cross-spawn');
const chalk = require('chalk');
const script = process.argv[2];
switch (script) {
   case "--version":
        console.log(require("../package.json").version);
       break:
    case "build":
   case "server":
       result = spawn.sync(
            "node"
            [require.resolve(`../lib/${script}`)],
            { stdio: "inherit" }
        process.exit(result.status);
        break;
   default:
        console.log(`Unknown script ${chalk.cyan(script)}.`);
       break;
```

### 5.4 build.js #

lib\build.js

```
const webpack = require("webpack");
const chalk = require("chalk");
function doneHandler(err, stats) {
    console.log(stats.toJson().assets);
  function build() {
       let config = require("./config/webpack.config.prod");
var compiler = webpack(config);
compiler.run(doneHandler);
build();
```

## 5.5 webpack.config.prod #

lib\config\webpack.config.prod.js

```
const path = require("path");
module.exports = {
   entry: "./src/index.js",
   output: {
     path: path.resolve('dist'),
      filename: "[name].js"
```
